QUESTION 1

15 seconds to prepare, 45 to speak

Ejemplos de preguntas:

- Some people prefer to get up early in the morning and start work. Others prefer to get up later and work until late at night. Which do you prefer?
- Some people prefer to read physical books made from paper, while others prefer to read electronic books on a digital device. Which do you prefer and why?
- Do you agree or disagree with the following statement? All high school students should wear school uniforms
- For your last assignment, the professor expects you to create a presentation. You can work alone, with a partner, or with a group. Which would you choose?
- Some teenagers work while attending high school. Please discuss the advantages and disadvantages of having a part-time job while in school.

Template	**Content**
To me, I definitely think that....	- Restate the question - Opinion - One specific reason
I remember when...	- Personal example or anecdote
On top of that/Besides/Moreover	- Second reason
For example...	- Example or anecdote
So, to sum up... / This is why I think so	- Restate your opinion - Restate the question

Example: Would you prefer to work at one job your entire life or to switch jobs every five years? Explain your response with details and examples.

To me, I definitely think that it is better to switch jobs every five years because old jobs get boring and new jobs are exciting.

I remember when I worked at a school in New York, and by the end of my time there, I was ready for a change. You see, at first, everything was new and interesting but by the fifth year, I was tired of taking the same train to go to the same building every day.

On top of that, starting a new job is a new opportunity. For example, after my job in New York, I moved to Japan and started teaching English to children, which, was completely different. It motivated me to learn more about childhood education and expand my knowledge.

So, to sum up, if I had to choose, I would definitely opt for changing my job every five years.

QUESTION 2

Campus announcement (new rule or change) and conversation. Report on the opinion of one of the speakers in the conversation and explain why he or she feels that way. Report on opinions and supporting reasons, not opinion.
50 seconds to read, 60-120 to listen, 30 to prepare, 60 to speak

Template	Content
The reading passage announces a change on campus/proposes a change to a campus policy. In particular.... (change or proposal)	- Introduce the reading passage - State the change
The man/woman in the conversation is (in favor of/against) this idea. To start, he/she says that (explain 1st reason).	- Transition to the conversation - State one speaker's opinion - State one specific reason
Secondly, he/she explains that (2nd reason)	- State the second specific reason
As you can see, the man/woman in the listening clearly agrees/disagrees with this plan.	- Restate the speaker's stance

Example:

The reading passage announces a change on campus. **In particular,** the administration has decided to split the graduation ceremony into two separate events.

The woman in the conversation is against this idea. To start, she says that she wants to graduate with her friends, and if the ceremony is split, then they can't graduate together. She does admit that the graduation ceremony is too long, but it can be shortened by reducing the amount of speakers.

Secondly, she explains that the graduation even should be held outside rather than in the auditorium if the committee is concerned about space. Most other schools hold their graduation events outside and there is plenty of space if graduating students want to invite more guests.

As you can see, the woman in the listening clearly disagrees with this plan.

QUESTION 3

Academic reading and lecture. Explain the academic topic introduced in the reading and describe the main points about the topic described in the lecture. General to specific.
50 seconds to read, 60-120 to listen, 30 to prepare, 60 to speak

Template	**Content**
According to the reading, (topic) is (topic definition)..../From that article, we learn that	- Introduce and define the reading topic
In the lecture, the professor delves deeper into this subject by providing an example of/two examples of (topic).	- Transition to the lecture - State first example and expand on it
First of all, the lecturer mentions/ In addition, he/she goes on to say...	- State second example and expand on it
The example clearly illustrates... and let us have a better understanding of what .... is.	- Provide a conclusion to the topic

Example:

According to the passage, swarm intelligence is when a bunch of different insects of the same species are able to combine and connect their thoughts so hundreds of individuals can think and act as one.

In the lecture, the professor delves deeper into this subject by providing two examples of swarm intelligence. To start, the lecturer explains that ants use this type of thinking when gathering food. One group of ants will find a way to the food source and release pheromones to mark the trail. Other ants will then follow the pheromone scent. He goes on to say that honeybees use this type of intelligence when looking for a new place to live. In fact, a queen bee might send out a pheromone that attracts thousands of other bees that come together and form a kind of temporary home where the bees can survive.

So, after listening, I now have a better understanding of what swarm intelligence is.

QUESTION 4

Academic lecture. Sum up the topic and main points from the lecture.
120-180 seconds to listen, 20 seconds to prepare, 60 seconds to speak

Template	Content
The professor goes into a ton of detail about, (topic), which (detail/definition)...	- Introduce the topic and elaborate on it
After introducing the topic, the lecturer mentions that (example 1 with details)...	- Introduce first example and give details
He/She then notes that (example 2)	- Introduce second example and give details
So, after hearing this lecture, I know have a better understanding of...	- Conclude and restate

Example:

The professor goes into a ton of detail about the preservation of artifacts in museums, which helps slow down the deterioration process.

After introducing the topic, the lecturer mentions that a stable temperature is key. Materials like paper and wood dry out easily if the temperature changes too drastically, which is why most museums keep the temperature between 68-72 degrees.

He goes on to say that the moisture in the air, otherwise known as relative humidity, must be carefully controlled. For metal objects, higher humidity levels could lead to corrosion. On the other hand, low humidity can make objects like paper more fragile. Most places housing artifacts keep the relative humidity between 45-50%.

So, after hearing this lecture, I now have a better understanding of how museums preserve their artifacts.
